

G350 perimeter and registration

Print at 100% / Actual size. Disable Fit to page.

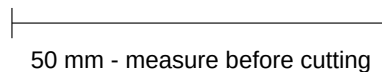

Provisional 76 x 118 x 1.6 mm - original shell fit unverified.

Cut on the solid perimeter. No mounting holes have been inferred.

Both layers use the same PCB X/Y datum; this is a through-board overlay.

Check the button membrane and USB-C / microSD openings against these positions.

Record after checking the original shell:

Shell / original PCB revision: _____

Perimeter / rib interference: _____

Mount centers and diameters: _____

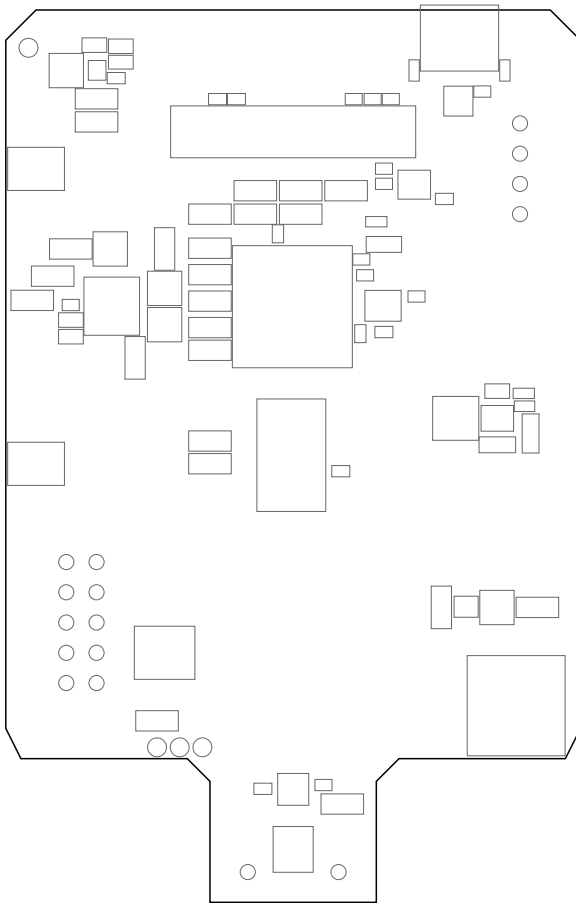

Button / port alignment: _____

G350 assembly-space overlays

Print at 100% / Actual size. Disable Fit to page.

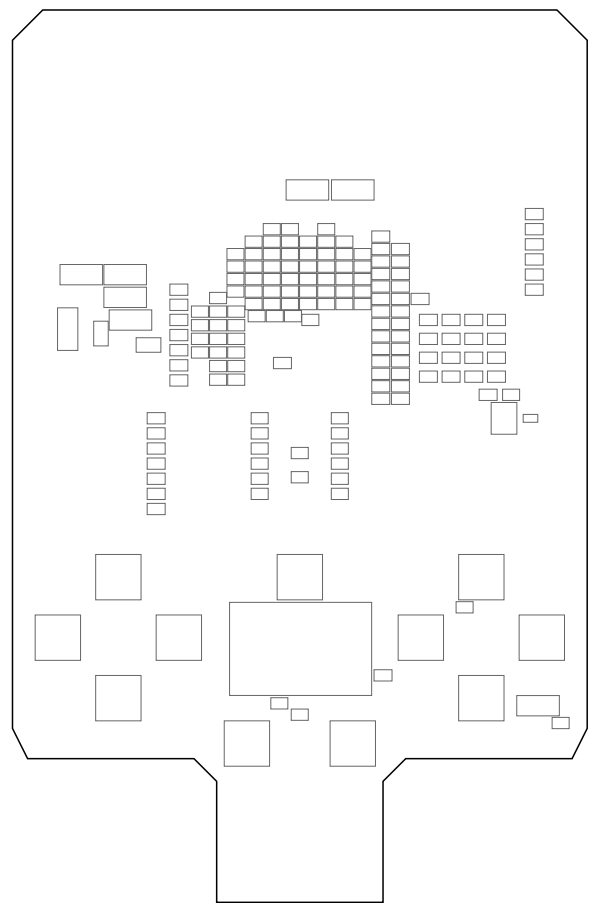

Provisional 76 x 118 x 1.6 mm - original shell fit unverified.

TOP - source X/Y coordinates

101 assembly courtyards

BOTTOM - source X/Y coordinates

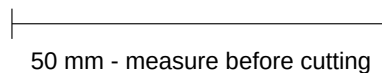

179 assembly courtyards

Bottom overlay is unmirrored: viewed through the board in the same datum as Top.

Flip the physical cutout to inspect the opposite shell half.

Courtyards show planar assembly space, not component bodies or occupied heights.

Main body: 76 x 99 mm. Speaker tab: 22 mm wide, extending 19 mm.

Original mounting, walls, ribs, button locations and port openings remain unmeasured.

Check display, battery, speaker, flex and cable volumes with the assembled shell.

Generated from the actual default tscircuit circuit.json; no part positions were changed.
